STRATEGIC NOTE OUTCOME PROGRESS NOTE

SHOWING DATA OF : **2022**

Timely gender-sensitive data on the impact and responses to crisis, including COVID-19, are produced and their use is promoted to inform policies, programmes, advocacy and research

Sex-disaggregated data on the lingering effects of the COVID-19 pandemic was generated, some of which was used to inform responses and government discussions (for instance, in Indonesia, estimates were used to inform G20 discussions). In addition, a nationally representative survey on gender and the environment was conducted in Tonga. Data collection finalized in December and data analysis is currently on-going. Estimates are expected to inform the country's disaster strategy. Finally, a pilot Time Use Module was implemented in Indonesia in two select provinces, to prepare the country for implementation at a national scale in 2023-2024.
