OUTCOME SDN_D_2.1 [XM-DAC-41146-SDN_D_2.1](#)

Women secure access to productive resources and engage in sustainable resources creation activities in rural, peri-urban, conflict, post-conflict and humanitarian settings.

OUTCOME DETAILS

SDG alignment

Impact areas

Women's economic empowerment

Organizational outputs

Financing for gender equality

Access to services, goods and resources

Policy Marker

GENDER EQUALITY

Humanitarian Scope

Outcome Description

Since it is the dreadful socio-economic situation that led to the social uprising in December 2018, women have expressed the need of extensive support to fight the growing poverty that affect them the most. Therefore, UN Women in the approach of LNOB has targeted one of the most marginalized regions of Sudan where women suffer a high level of discrimination to support their involvement in the fishery sector where they have been completely excluded and support their economic empowerment and the promotion of their human rights. UN Women interventions with the support of the Italian cooperation will focus on working with women groups to acquire the resources, equipment and needed skills to intervene in the fish value chain, to not only improve their financial situation but also protect their rights. Will participate to this outcome women groups, the Italian cooperation and other potential donors, the Ministries of Agriculture and of Gender.

STRATEGIC NOTE OUTCOME PROGRESS NOTE

SHOWING DATA OF : 2022

Women secure access to productive resources and engage in sustainable resources creation activities in rural, peri-urban, conflict, post-conflict and humanitarian settings.

Women's productive capacities and productivity are enhanced: The project that targeted women in Ashatt community in Red Sea with provision of goat has proven to be successful in securing women's access to productive resources and in increasing milk production despite the short period of the provision of the goat (goats were distributed to women in October 2022). Most of the women who have been targeted by the project are heading households. The selected goats are highly productive and adaptive to the environment of the Red Sea, The average daily milk production stands at ten-pound per goat and is of a good quality, compared to the goats that are previously owned by households and are producing daily milk on average at two-pound per goat, which in most cases barely cover the internal family need. Women's productivity in value chain transformation is increased Women's beneficiaries of the project on enhancing women entrepreneurial capacities in agribusiness and fishery value chains transformations have engaged in the fish drying and food processing. They stated that, they have produced variety of processed foods that include dried fish, onion, tomatoes, okra, green leaves and other variety of high quality dried vegetables. The training on the products quality management has supported women to supply their products in innovative way that fulfill the standards. With this result, women continued producing and their productivity is getting increased regularly.
